LIFELONG RESEARCH OBJECTIVE

My research seeks to make AI systems genuinely trustworthy: factually reliable, consistent in their reasoning, and transparent about uncertainty and limitations. I aim to advance the foundations of trustworthy machine intelligence while translating these insights into robust language models that people can confidently rely on in real-world applications.

RESEARCH INTERESTS

My research focuses on trustworthy language models, particularly on closing the gap between their rapidly advancing capabilities and the reliability required for real-world deployment. My primary interests include factual reliability, robust reasoning, and rigorous model evaluation. I study structured and efficient methods for improving factual grounding and reasoning, while systematically analyzing model behavior, uncertainty, and failure modes. My broader goal is to develop reliable language models whose capabilities and limitations are well understood under the constraints of practical, real-world use.
